# The iCall Suite Brand

iCall Suite has evolved to become a market-leading global brand in cloud call reporting and recording solutions. As the market advances, Tollring remains flexible in its approach and focused on developing product features in line with customer need.

The iCall Suite brand reflects the qualities of the product; modern and clear with graphical simplicity, whilst providing the channel with a strong product identity which will blend easily with a partner's own marketing communications.

02

*Cutting edge data visualisation  
and customer engagement solutions  
that help customers to gain a greater  
understanding of their business.*

# The iCall Suite Logo

---

The iCall Suite logo always appears in lower case text without a strapline. No modifications of any kind should be made to the logo. The logo encompasses pips which are representative of the fully integrated modules that work together to create a complete solution.

The logo uses two colours, and is intended for use on white or dark grey. If it is to be used on a dark background colour, the white transparent version should be used.

The iCall Suite logo is the umbrella logo for the product suite. For each of the modules there is an individual logo with strapline (which should always appear with a strapline) and individual module icons.

The logo should work across all media. Please refer to the logo suitcase and choose a version to suit the production method and design context. All of these logo versions are included in the logo suitcase zip file and are explained in these brand guidelines.

## Written Text

When iCall Suite is written in body text of any document it should be written with a small 'i' and capital 'C' and 'S'. Each module is preceded with iCS, written in the same way, and the first letter of the module itself should be capitalised. For example iCS Report.

# 03

## Standard full colour logo

---

## Standard full colour logo for use on a coloured background

---

Use the reversed logo on solid black if required, dark grey or similar is preferred.

# Logo Colour Variations

.....

If it is necessary to use the iCall Suite logo on a colour, the colour should be one of the colours from the palette of primary module colours (please see page 13). The white transparent version of the logo should be used, enabling the pips to graduate over the colour background.

iCall Suite on green background

iCall Suite on blue background

iCall Suite on purple background

# Logo Clear Zone

---

## The Logo Clearance Zone

The 'clearance zone' refers to the area directly surrounding the iCall Suite logo, to keep it separated from other content and logos. No other text or graphic elements should appear in the area immediately surrounding the logo. This clearance zone preserves the desired visual impact of the logo and is equivalent to the height of the 'C' in the wordmark. The space between the symbol and the wordmark is determined by the logo size.

## Minimum Size

---

### The Logo Minimum Size

The iCall Suite logo should always be clear and legible on printed items. Please ensure the minimum width is no less than 25mm.

# The Logo: Incorrect Usage

These are examples of incorrect usage of the iCall Suite logo (both standard and reversed versions). No modifications of any kind should be made to the logo.

**DO NOT** change any colour of any part of the logo.

**DO NOT** rotate any part of the logo.

**DO NOT** stretch, squash or manipulate the logo in any way.

**DO NOT** add any straplines to the logo.

**DO NOT** lose transparency of the logo pips when on a colour background. Use the appropriate master logo.

**DO NOT** remove any part of the main logo.

# Product / Module Logos

iCall Suite consists of core products with module upgrades, each of which has a logo for use in sales and marketing. These logos should always be used with their respective straplines. Straplines can only be changed if authorised by Tollring, please email [marketing@tollring.com](mailto:marketing@tollring.com). For colour breakdowns please refer to page 13.

There are standard and reversed versions of each module logo. Please ensure the minimum width is no less than 25mm.

# Product / Module Logos

---

For colour breakdowns please refer to page 13.

# Product / Module Logos: Incorrect Usage

These are examples of incorrect usage of the iCall Suite product/module logos (both standard and reversed versions). No modifications of any kind should be made to the logos.

**DO NOT** change any colour of any part of the logo.

**DO NOT** rotate any part of the logo.

**DO NOT** stretch, squash or manipulate the logo in any way.

**DO NOT** add or change any straplines to the logo.

**DO NOT** use the standard logo (for white backgrounds) on any colour.

**DO NOT** remove any part of the logo.

# Icons

The standard icons are grey (please refer to the colour breakdown on page 13). Reversed icons are white and it is recommended that they are used on either dark grey or the colour of that particular module.

# Icons: Incorrect Usage

These are examples of incorrect usage of the iCall Suite icons (both standard and reversed versions). No modifications of any kind should be made to the icons.

**DO NOT** change any colour on any part of the logo unless authorised by Tollring: [marketing@tollring.com](mailto:marketing@tollring.com)

**DO NOT** stretch or manipulate the logo under any circumstances.

**DO NOT** rotate any part of the logo.

**DO NOT** change the infill colour of the icon. The colour of the icon should remain white, as they are on the master logos.

**DO NOT** change the line thickness of the module icon logos.

# Application Logo / Favicon

---

The only time when the 'pips' are permitted to be separated from the logo is when using the application logo / favicon. The icon is on a grey background and can be found within the logo suitcase as both a .png and .ico file.

For a full colour breakdown please refer to page 13.

# Brand Colours

Please help Tollring to keep the iCall Suite brand consistent and refer to these colours in all assets and communication material. Agencies should be supplied with the correct logo files and colour values.

As a general rule, please encourage CMYK for print and use RGB or HEX values for online communications.
